

Eastwind Diamond Abrasives
PO Box 302, 61 Main Street
Windsor, VT 05089

IMPORTANT INSTRUCTIONS

DIAMOND<>DOT METAL BOND PRODUCTS

To insure maximum performance and long life from your diamond<>dot metal bond abrasive product, please follow these instructions carefully:

1. These diamond abrasives can be used **wet or dry, however, to extend the life of the product it is best to use them well lubricated.**
2. Use a light touch at the beginning.
3. Do not force sharp edges into the abrasives.
4. Use light to medium pressure for best results and to ensure the longest life of the product.
5. Use the whole surface of the abrasive, never just one spot. Take advantage of the fact that the entire surface is coated with diamond abrasives. This is the second most important factor after using sufficient lubrication which extends the life of the product.
